Bolgiano's CAPITOL PARK LAWN GRASS SEED

THE NATION'S PRIDE

IT IS the accumulated experience of sixty years that has made possible the development of Bolgiano's Capitol Park Lawn Grass Mixture. It contains a carefully selected, well-balanced blend of high-quality recleaned seed. Through the years we have learned that the finest lawns for the Washington area are those made of fine-bladed deep-rooting grass. It is an easy matter to have a good-looking lawn in spring but it is the year-round test that determines the quality of good lawn seed. We are proud of our Capitol Park Lawn Seed and we believe you will find this leader in the Washington area the answer to your lawn problem.

BOLGIANO'S MODERN LAWN GRASS MIXTURES

BOLGIANO'S *"WHITE HOUSE"* SHADY LAWN GRASS SEED

The Grass That Will Grow in Shady Places

To provide a turf for shady places which would match the turf of our Capitol Park Lawn Grass in the sun, we experimented with grasses best adapted for growing in the shade until this formula was perfected. The resulting White House Shady Lawn Seed has removed cause for worry about those once bad places under trees.

Lb. 85c.; 5 lbs. $4.15; 10 lbs. $8.00; 25 lbs. $18.75

HORMONE-TREATED LAWN SEED

Treating seeds with Rootone Hormone Powder serves to augment the natural hormones which stimulate root-formation and top-growth. In our Hormone-treated Lawn Grass Mixture we use only the best varieties of seed, including Bent Grass.

Lb. $1.10; 10 lbs. $10.45; 25 lbs. $25.50

PUTTING-GREEN GRASS

BOLGIANO'S *"FAIRGREEN"* LAWN GRASS SEED

A Superior Mixture with Creeping Bent

Selecting grasses capable of producing a dense velvety lawn and resistant to dry summer weather, we believe we have in Fairgreen a permanent turf mixture which is unsurpassed, especially on slopes and terraces.

Lb. $1.00; 5 lbs. $4.85; 25 lbs. $23.00

WHITE DUTCH CLOVER (Trifolium repens)

Some White Clover is usually included in lawn grass mixtures as it makes an excellent turf that stands constant trampling. It is of dwarf habit, spreads rapidly and is very hardy.

Lb. $1.25; 5 lbs. $5.25; 25 lbs. $23.25

KENTUCKY BLUE GRASS (Poa pratensis)

This is undoubtedly the best of lawn grasses for neutral soils. Its splendid root system forms a tough sod that will stand hot, cold or dry weather. Although Blue Grass requires about two years to get well established, it is well worth waiting for. Can be sown in a mixture of other grasses. Sow in fall or spring at the rate of 5 pounds per 1000 square feet.

Lb. 90c.; 10 lbs. $8.25; 25 lbs. $18.00

RED-TOP (Agrostis alba)

A valuable, permanent, narrow-blade grass especially adapted to our climate. Used in most lawn mixtures.

Lb. 90c.; 10 lbs. $8.25; 25 lbs. $18.00

DOMESTIC RYE GRASS

A quick-growing grass used as a nurse-crop in many lawn mixtures. Sow 10 pounds per 1000 square feet of lawn.

Lb. 25c.; 10 lbs. $2.00; 25 lbs. $4.25

CHEWING'S FESCUE

This important component of all good shady lawn mixtures forms a low, dense, mat-like turf of fine needle-like leaves. It is popular for lawns and golf courses because of its drought-resistance and ability to thrive on most soils. If used alone, sow 8 pounds per 1000 square feet.

Lb. 85c.; 5 lbs. $4.00; 25 lbs. $16.50

Prices quoted on grass seed do not include postage. See page 2 for Parcel Post rates. If postage is included with order, seed will be sent by Parcel Post, otherwise shipment will be made by Express Collect.

Frostproof Cabbage Plants
WILL DOUBLE YOUR PROFITS

Ready for Immediate Delivery

Matures Heads Two to Three Weeks Earlier Than Your Home-grown Plants

Our plants are grown in the South where are found soil and climatic conditions just suited for growing tough, hardy Cabbage plants during the winter and early spring. Here the plants develop steadily until they are ready for shipment at 8 to 10 weeks of age. They are then very tough and hardy and can be planted in the open ground a month to six weeks sooner than the more delicate hotbed or coldframe plants.

When spring comes the plants grow very fast, maturing headed Cabbage 2 to 3 weeks sooner than from hotbed or coldframe plants. Think what the difference in profit will be if your crop is matured and marketed before the general crop from home plants is matured!

One ounce will sow 200 feet of row; 3 to 4 pounds, an acre.
Prices include postage on pkts., ozs., ¼lbs., and lbs.

CULTURE. Parsley needs a mellow, rich soil and the seed is slow to germinate. A good plan is to soak the seed a few hours in warm water and then plant ½ inch deep and thin plants to stand 8 to 10 inches apart. If the leaves of curly varieties are all cut off when they are 3 inches tall, growth will be better. Liberal cutting of Parsley improves quality. For winter use move plants to a coldframe or light cellar, or a supply can be potted in 6-inch flower-pots and grown in a kitchen window.

Peas are not only delicious food but they contain iron and vitamins A, C and B_1. Every garden needs lots of Peas.

CULTURE. Peas mature earliest in light, rich soil. For general crop use a rich, deep loam or one inclining to clay. When grown in garden sow in double rows 6 to 8 inches apart; the rows 2 to 4 feet apart. Commence sowing the extra-early varieties as early as the ground can be worked in February or March; plant for a succession every two weeks until June, then discontinue until the middle of August, when a good crop may be secured by sowing extra-early and early sorts for fall use. They should be kept clean and earthed up twice during the growth. The wrinkled varieties are not as hardy as the small, round sort and if planted early should have a dry soil or they are liable to rot in the ground. They are, however, the sweetest and best-flavored varieties. The dwarf varieties are best suited for small gardens.

Sweet Potatoes

CULTURE. Don't wait for a rain or a "season" to set out Sweet Potato plants. Harrow your ground well before laying it off, then throw up the ridges higher than you want them, and if the soil is very dry, allow 2 or 3 days for the moisture to rise. Then knock off the top of the ridge just ahead of planting; make a mud batter with water and clay loam, or better, with the addition of fresh cow-dung, about as thick as cream; dip the plants, in hands of about 20, into this, so that mud clings to them.

Plants ready in May and should be planted in May or June.

Porto Rico. A large yielder of deep rich red, sweet, juicy tubers.

Nancy Hall. Well known and popular.

Two Pages of Great Plants

On pages 50 and 51 we offer a group of plants providing exceptional decorative value. Plants like Cannas and Caladiums are showy, and beds of them provide pleasing exotic pictures. Gladiolus are beautiful in the garden, and few ever have enough plants to supply the desire for "Glads" in the house. They are superb cut-flowers.

Tuberoses, the Peruvian Daffodil and the two Vines should be planted for their fragrance, even if they were not good-looking, but they are, so are doubly valuable. These are all important garden plants.

Dahlia tubers should not be planted until all frost danger is past. Set them in beds or borders in full sun. Rich soil containing plenty of humus will give best results. Dig a hole 6 inches deep and set the tuber flat in the bottom. Cover with 2 or 3 inches of soil and fill in gradually as the plant grows. Drive a stout stake beside the plant and tie the canes to it for support. Cultivate, water and feed regularly during the growing season.

CYCLONE KOAL KING BROODER

The **KOAL KING** has a scientifically designed flue cylinder, which automatically feeds the coal to the fire as required. The coal does not get "clogged" or "hung" in the stove. As long as there are a few pounds of coal left in the stove to burn, the fire will not die down or go out. Another important improvement: **The Koal King has a large non-clogging grate, which insures the positive burning of the coal.** It makes possible the holding of a large fire body.
